High Fidelity Simulation Workshops in Obstetric Anaesthesia

SIMSPACE 2

About the workshops:

During these 90-min sessions, one or two challenging clinical scenarios will be reproduced in a fully immersive environment including a high-fidelity patient simulator (mannequin). Delegates will have opportunities to observe and then manage the clinical cases. After each scenario, skilled instructors will provide constructive feedback during a debriefing session in which all participants will take part.

During these sessions, participants will:

- review and improve their knowledge in patient management in the clinical topic of the session (algorithms and clinical guidelines);
- practice and improve technical skills related to the clinical topic of the session;
- understand the importance of non-technical skills.

SimSpace 2 high-fidelity simulation programme is dedicated to **Challenging cases in obstetric anaesthesia**. Topic 1 and 2 will cover different crises, delegates can therefore register for either one of the sessions or for both of them, if they so wish.

Learning objectives:

By the end of these sessions, participants will:

- understand the strategies described in major recommendations for obstetric crisis management in the labouring parturient;
- understand the strategies described in major recommendations for obstetric crisis management in the caesarean section environment;
- understand the role of human factors, interdisciplinary and interprofessional collaboration to manage unexpected obstetric crises.

Target audience:

Residents, fellows and practitioners interested in improving their skills and knowledge in anaesthesia or ICU crisis management.

Chairs:

Yitzhak Brzezinski (Sinai (Tel Aviv, Israel)
Nicolas Brogly (Madrid, Spain)
Georges Savoldelli (Geneva, Switzerland)
